SOIL ASSOCIATION
ORGANIC FREE RANGE EGGS

The Soil Association's interpretation and certification of the Organic UK5 Standards are the highest commercial welfare and production standard available. Orchard Farm use this regulations as our minimum standard. We are currently in the process of compiling our own Egg Production Standard which expands and exceeds the Soil Association minimum requirements.

Our aim is to produce the best possible quality eggs from the happiest and healthiest hens by complying to our standard and achieving our key aims which include:

- Maximum of 500 hens in a flock
- 100% organic corn based feed rations
- Flocks moved onto fresh pasture range at least twice a year
- High quality housing and husbandry
- Straw bedded scratching areas
- Locally reared and traditional breed pullets
- Minimum of 10 hours sleeping time
- External ranging shelters, scratch feed and drinkers
- Eggs packed on farm and delivered within one week of lay

We hope you will agree that the proof is in the taste!
